Projects

Web Reads

Created the front-end and worked with the back-end for an application, called “Web Reads” mostly using the JavaScript frameworks React and Express, and a MongoDB database. This application uses machine learning to recommend books for the user based on their previous reading history.

Campus Management System

Created a CRUD application using React and Express that allows users to add campuses to a Postgres database, as well as students belonging to these campuses. Users were then able to update any information in the database as well as delete it.

Portfolio

Created and deployed a portfolio website to display my other projects, using React, Next.js and Tailwindcss. This site is currently deployed at <https://www.codedbychris.me/>.

Technical Skills

Languages

Programming: Python, C++, React.js, Javascript, SQL

Markup: L^AT_EX, HTML, CSS

Database Management Systems

MongoDB, PostgreSQL, MySQL

IDE

Microsoft Visual Studio, Visual Studio Code, XCode, IDLE

Version Control

Git

Education

Bachelor’s in Computer Science

Hunter College - New York City

Job Experience

E-Commerce Associate (11/2022 - Present)

Whole Foods Market, New York, NY: Scanned items, using handheld mobile device, for orders placed. Acquired highest metrics in the team. Worked as a team to complete orders that customers placed online.
